

NON-CROPLAND POLLINATOR MIX

Develop a pollinator habitat on non-crop portions of land using this diverse mix of annual and perennial forages that appeals to a range of pollinators

- Designed to provide food and promote a favourable environment for pollinating species
- Intended for larger areas where a low maintenance cover is desired
- Ideal for seeding under tree lines and field edges where modern equipment cannot efficiently work the land
- A variety of species to promote as many flowering plants over the longest length of time possible
- Plot can be mowed in the establishment year to control weeds if needed before the desired species get too tall
- Performs well in a variety of soil conditions
- Not recommended for small flower beds

Ingredients

Alfalfa, White Clover, Yellow Blossom Sweet Clover, Crimson Clover, Chicory, Sunflower, Alsike Clover, Single Cut Red Clover, Double Cut Red Clover, Brown Mustard, Groundbreaker Radish

Seeding Rate - 20 lbs. per acre

Best established in the spring

For best results, sow seeds into a firm, weed-free seedbed.

Seed to soil contact and good soil fertility can increase the rate of success. A seeding depth of 1/8" - 1/4" deep

Plant heights range from 6" to 4'+
