

Spyder Alfalfa

Spyder is an improved variety selected for its strong dormancy, excellent winterhardiness and improved disease resistance with the creeping rooted trait. It is a synthetic variety developed from a cross of a spreading-type alfalfa onto an elite yielding variety. Yield potential is consistently better than most creeping rooted varieties currently on the market and it also demonstrates a maturity with slightly quicker regrowth.

Key Benefits

- Creeping rooted alfalfa
- Fall Dormancy of 1 with winter survival of 1
- Higher yield potential for creeping rooted variety
- Very drought tolerant
- Performs well in higher altitudes

Agronomic Traits

Traits	Rating
Bacterial Wilt	HR
